

On the Rose-Hulman Course Eval for CSSE373

Please give your feedback about the following items

- Starting Week #2 – this class was asynchronous, meaning we did not have preset meeting times where we all met online – give me your thoughts on that.
- What things did other Rose professors do better when transitioning to online, as compared to 373?
- Give me feedback about the voice over slides I recorded:
Did they help?
Did you watch them multiple times?
Were you bummed when sometimes all I could provide were the slides?
- The purpose of the quizzes is to give you a reason to recall the material, this helps with learning. Given that context, what are your thoughts on the quizzes?
Beneficial, not beneficial, how could they be made better, etc.
- Which of the Labs were most beneficial?
Modify a command interpreter
Develop test cases based on an operation's contract
Layer one component on another
Layer a component directly in raw C++ nodes and pointers
- What about the Activities? Give me your thoughts on how to make them better
